

An Info-Point unit will deliver your information to your visitors' mobile devices. Anywhere.

No broadband? No phone signal? No power? No problem!

An Info-Point creates your own 'local web', so any visitor can easily browse or download your information or interact with your interpretation using their smartphone or tablet. Without installing an App.

Key features:

- Compatible with all smartphones and tablets
- Will deliver rich media, apps and interactives
- Needs no phone signal or internet access
- Mains, battery or solar powered
- Powerful and robust industrial grade hardware
- Easy to upload and update the content yourself
- Extensible across large sites - indoor or outdoor
- Does not incur usage or ongoing charges
- Completely secure
- 5-year warranty
- Wide variety of customer reference sites

The visitor experience - easy, safe, secure

The visitor sees a Wi-Fi hot-spot called 'Info-Point' to which they connect without any password (unless you choose to restrict access). You can use posters and leaflets to encourage visitors to connect their device. It's the same as they would do at home or at an internet cafe.

The user then opens their browser, and from your Info-Point home page explores the content you have uploaded.

You can integrate QR codes, NFC tags or Bluetooth beacons to direct the browser to specific content.

Info-Point provides your content exclusively, and only while at your site. Visitors cannot access it from elsewhere, and cannot use it to access other internet content.

How do I operate it?

Leave it on permanently or switch it on daily. The unit only consumes the same power as a low-energy light bulb. Use the simple administration interface to upload your content. Info-Point is based on standard technology that you have open access to. You and your web developers can enhance it over time, adding fresh content and developing a wide range of interactive apps and advanced features such as Augmented Reality.

Other features

Range

The Wi-Fi range is up to 250 metres, depending upon the local terrain and walls.

Networking

Multiple units can be used to create 'hot spots' in outdoor spaces, while intelligent networking 'slave' units can create a continuous and seamless coverage of areas that don't normally suit Wi-Fi, such as underground rooms.

Multiple Power Options

Info-Point is supplied ready for mains or 12/24 V operations from battery, solar, vehicle, vessel or other sources.

Multi-Lingual support

A language support option is built in. When enabled, users can switch languages for content and navigation with one button.

Automatic failure recovery

Info-Point has a built-in 'watchdog' that will monitor the Info-Point and automatically re-boot should it detect that it's not working. You can use Info-Point for 24/7 unattended and out-of-hours operation with confidence. It will even recover from power cuts.

Webcam feature

We can provide webcams to stream live video, or to auto-record time lapse and highlights. This can even be used as a wheelchair accessibility substitute.

Branding

Info-Point is fully customisable to your brand.

Security

Users don't need physical access to Info-Point, so it can be sited securely and out of reach.

Info-Point units do not connect to your network or to the Internet. That means no risk to your IT systems, and no possibility of internet misuse.

Speed

Info-Point is faster than accessing content across the internet owing to its direct connection to the server.

Warranty

Info-Point comes with a 5-year no-quibble warranty.

Updates and Maintenance

Info-Point is a fully supported product, and can be upgraded as technology advances.
